

Homework 5

Evan Conrad
Evan Srock
Ryan Rozema

Step 1

We added a function `get_domains` to calculate domains. created `tdidt` with the help of a bunch of helper functions. Titanic is all categorical so there was no need to discretize.

Step 2

We discretize weight and mpg for the decision tree.

Step 3

We added a function `print_rules` that starts the IF and calls a recursive function `print_rules_helper` which prints the rest of the rules.
